## Company Overview

G4S Security Services, via corporate acquisitions, is proud of its longevity in Micronesia since 1969; is the Marianas branch office of the largest global security solutions corporation G4S plc., operating across 120 countries, headquartered in the UK. As the Marianas leader in life safety, fire prevention and security systems, G4S has U.S. Treasury Listed bonding capability and has extensive expertise in providing support services in the sectors of Government, Private Energy & Utilities, Oil & Gas, Transport & Logistics, Ports & Airports, Leisure & Tourism, Financial Institutions, Retail and Industrials.

## Systems Solutions

- **Construction Workforce Logistics Tracking & Monitoring**
- **Design, Engineering, Electrical and CAD Drawings**
- **Fire Alarm & Suppression Systems, NICET Technical Certifications**
- **Video Surveillance Smart Systems**
- **Intrusion Alarm & Access Control & Systems**
- **Automated Gate Systems & Fencing**
- **Data & Communication Systems: Fiber Optics & Wireless**
- **IP & IT Server Systems**

## Services Solutions

- **Construction Security**
- **Terrorism Awareness Training**
- **Workforce Manpower Vetting and Recruitment**
- **Cash Processing & Armored Transport**
- **Security Officers (armed & non-armed)**
- **Document Management, Storage & Destruction**

### KBR Anti-Terrorism Force Protection:

Project involved the design and installation of a variety of Access Control Systems (ACS) and Electronic Security Systems (ESS) at multiple military locations on Guam. The primary purpose of these systems was to provide new, and/or enhance existing Access Control and Monitoring of critical military sites. This included the installation of high impact Cable Restrained Fencing; whereby, access to the site through the fence was controlled by motorized, crash resistant, cantilevered gates and turnstiles, integrated with smart-ID card, vehicle recognition, and intercom and CCTV systems.

### Guam International Airport-Clean Agent Fire Prevention:

Project included the installation of FM200 Fire Protection systems in two (2) of the airports MIS Server Rooms; and new FM200 Fire Protection systems; installed an elaborate Argon suppression system; a new control panel, fire protection/alarm, and electrical work. FM-200® & Argon Fire Suppression agent is particularly useful where environmentally acceptable agent is essential; clean up of electronic media presents a problem; weight versus suppression potential is a key factor; electrically non-conductive medium is needed and people compatibility is an overriding factor.

### International Trade Center-Integrated Solution:

Project purpose was to upgrade the security systems of the high-profile facility to enhance the effectiveness of manned security, while complimenting the building renovation plans to attract multi-national tenants in a competitive property leasing market. G4S implemented the solutions of IP CCTV cameras, smart-card access control, mobile patrol property checks and remote video monitoring.
