- **Fire Alarm & Suppression Systems, NICET Technical Certifications**
- **Video Surveillance Smart Systems**
- **Intrusion Alarm & Access Control & Systems**
- **Automated Gate Systems & Fencing**
- **Data & Communication Systems: Fiber Optics & Wireless**
- **IP & IT Server Systems**

Services Solutions

- **Construction Security**
- **Terrorism Awareness Training**
- **Workforce Manpower Vetting and Recruitment**
- **Cash Processing & Armored Transport**
- **Security Officers (armed & non-armed)**
- **Document Management, Storage & Destruction**

KBR Anti-Terrorism Force Protection:

Project involved the design and installation of a variety of Access Control Systems (ACS) and Electronic Security Systems (ESS) at multiple military locations on Guam. The primary purpose of these systems was to provide new, and/or enhance existing Access Control and Monitoring of critical military sites. This included the installation of high impact Cable Restrained Fencing; whereby, access to the site through the fence was controlled by motorized, crash resistant, cantilevered gates and turnstiles, integrated with smart-ID card, vehicle recognition, and intercom and CCTV systems.

Guam International Airport-Clean Agent Fire Prevention:

Project included the installation of FM200 Fire Protection systems in two (2) of the airports MIS Server Rooms; and new FM200 Fire Protection systems; installed an elaborate Argon suppression system; a new control panel, fire protection/alarm, and electrical work. FM-200® & Argon Fire Suppression agent is particularly useful where environmentally acceptable agent is essential; clean up of electronic media presents a problem; weight versus suppression potential is a key factor; electrically non-conductive medium is needed and people compatibility is an overriding factor.

International Trade Center-Integrated Solution:

Project purpose was to upgrade the security systems of the high-profile facility to enhance the effectiveness of manned security, while complimenting the building renovation plans to attract multi-national tenants in a competitive property leasing market. G4S implemented the solutions of IP CCTV cameras, smart-card access control, mobile patrol property checks and remote video monitoring.
